Advances in Mapping from Remote Sensor Imagery: Techniques and Applications From Brand: CRC Press

Advances in Mapping from Remote Sensor Imagery: Techniques and Applications reviews some of the latest developments in remote sensing and information extraction techniques applicable to topographic and thematic mapping. Providing an interdisciplinary perspective, leading experts from around the world have contributed chapters examining state-of-the-art techniques as well as widely used methods.

The book covers a broad range of topics including photogrammetric mapping and LiDAR remote sensing for generating high quality topographic products, global digital elevation models, current methods for shoreline mapping, and the identification and classification of residential buildings. Contributors also showcase cutting-edge developments for environmental and ecological mapping, including assessment of urbanization patterns, mapping vegetation cover, monitoring invasive species, and mapping marine oil spills?crucial for monitoring this significant environmental hazard.

The authors exemplify the information presented in this text with case studies from around the world. Examples include:

- Envisat/ERS-2 images used to generate digital elevation models over northern Alaska
- *In situ* radiometric observations and MERIS images employed to retrieve chlorophyll a concentration in inland waters in Australia
- ERS-1/2 SAR images utilized to map spatiotemporal deformation in the southwestern United States

Aerospace sensors and related information extraction techniques that support various mapping applications have recently garnered more attention due to the advances in remote sensing theories and technologies. This book brings together top researchers in the field, providing a state-of-the-art review of some of the latest advancements in remote sensing and mapping technologies.

Editorial Review

About the Author

Xiaojun Yang is a tenured faculty member with the Department of Geography at Florida State University, USA. His research focuses on the development of geospatial science and technology to support geographic inquiries in urban and environmental domains. Dr. Yang has performed research for NASA and received grants from the NSF and EPA. He has authored or coauthored more than 80 English publications, including five books with John Wiley, Springer, and CRC/Taylor & Francis.

Dr. Yang has served as a guest editor for several peer-reviewed journals including *Photogrammetric Engineering and Remote Sensing*, *ISPRS Journal of Photogrammetry and Remote Sensing*, *International Journal of Remote Sensing*, *Computers, Environment and Urban Systems*, and *Environmental Management*. He currently serves the second term as chair of the International Cartographic Association (ICA) Commission on Mapping from Remote Sensor Imagery (2011–2015) and director of the Cartography and Geographic Information Society (2012–2015).

Jonathan Li is professor of geomatics at the University of Waterloo in Canada. His research interests include remote sensing, mobile mapping, and geographic information systems. Dr. Li has authored more than 190 publications, including five books with Springer and Taylor & Francis. He is vice chair of the International Cartographic Association (ICA) Commission on Mapping from Remote Sensor Imagery (2011–2015), chair of the ISPRS Inter-Commission Working Group V/I on Land-Based Mobile Mapping Systems (2008–2012), and vice chair of the International Federation of Surveyors (FIG) Commission 4 on Hydrography (2011–2014).

Users Review

From reader reviews:

David Binkley:

This book untitled *Advances in Mapping from Remote Sensor Imagery: Techniques and Applications* to be one of several books that best seller in this year, honestly, that is because when you read this reserve you can get a lot of benefit upon it. You will easily to buy this specific book in the book retail outlet or you can order it by way of online. The publisher in this book sells the e-book too. It makes you more readily to read this book, since you can read this book in your Smartphone. So there is no reason to your account to past this publication from your list.

Carrie Correll:

The publication untitled *Advances in Mapping from Remote Sensor Imagery: Techniques and Applications* is the e-book that recommended to you you just read. You can see the quality of the e-book content that will be shown to an individual. The language that creator use to explained their ideas are easily to understand.

The article author was did a lot of research when write the book, so the information that they share for you is absolutely accurate. You also can get the e-book of Advances in Mapping from Remote Sensor Imagery: Techniques and Applications from the publisher to make you far more enjoy free time.

Keith Dunn:

The publication with title Advances in Mapping from Remote Sensor Imagery: Techniques and Applications has lot of information that you can study it. You can get a lot of profit after read this book. This book exist new know-how the information that exist in this publication represented the condition of the world now. That is important to yo7u to understand how the improvement of the world. This specific book will bring you throughout new era of the glowbal growth. You can read the e-book in your smart phone, so you can read the item anywhere you want.

Tia Rosario:

This Advances in Mapping from Remote Sensor Imagery: Techniques and Applications is great book for you because the content and that is full of information for you who always deal with world and also have to make decision every minute. This book reveal it details accurately using great coordinate word or we can declare no rambling sentences within it. So if you are read the idea hurriedly you can have whole facts in it. Doesn't mean it only provides straight forward sentences but challenging core information with splendid delivering sentences. Having Advances in Mapping from Remote Sensor Imagery: Techniques and Applications in your hand like having the world in your arm, data in it is not ridiculous a single. We can say that no guide that offer you world throughout ten or fifteen moment right but this reserve already do that. So , this can be good reading book. Hello Mr. and Mrs. occupied do you still doubt in which?
