Programming Computer Vision with Python: Tools and algorithms for analyzing images By Jan Erik Solem

If you want a basic understanding of computer vision's underlying theory and algorithms, this hands-on introduction is the ideal place to start. You'll learn techniques for object recognition, 3D reconstruction, stereo imaging, augmented reality, and other computer vision applications as you follow clear examples written in Python.

Programming Computer Vision with Python explains computer vision in broad terms that won't bog you down in theory. You get complete code samples with explanations on how to reproduce and build upon each example, along with exercises to help you apply what you've learned. This book is ideal for students, researchers, and enthusiasts with basic programming and standard mathematical skills.

- Learn techniques used in robot navigation, medical image analysis, and other computer vision applications
- Work with image mappings and transforms, such as texture warping and panorama creation
- Compute 3D reconstructions from several images of the same scene
- Organize images based on similarity or content, using clustering methods
- Build efficient image retrieval techniques to search for images based on visual content
- Use algorithms to classify image content and recognize objects
- Access the popular OpenCV library through a Python interface

Editorial Review

About the Author

Jan Erik Solem is a Python enthusiast and a computer vision researcher and entrepreneur. He is an applied mathematician and has worked as associate professor, startup CTO, and now also book author. He sometimes writes about computer vision and Python on his blog www.janeriksolem.net. He has used Python for computer vision in teaching, research and industrial applications for many years. He currently lives in San Francisco.

Users Review

From reader reviews:

Linda Pillar:

Do you have favorite book? When you have, what is your favorite's book? E-book is very important thing for us to learn everything in the world. Each guide has different aim or even goal; it means that e-book has different type. Some people really feel enjoy to spend their time for you to read a book. They are really reading whatever they get because their hobby is actually reading a book. How about the person who don't like studying a book? Sometime, man or woman feel need book whenever they found difficult problem or perhaps exercise. Well, probably you'll have this Programming Computer Vision with Python: Tools and algorithms for analyzing images.

Olga Harrington:

The book untitled Programming Computer Vision with Python: Tools and algorithms for analyzing images is the publication that recommended to you to learn. You can see the quality of the guide content that will be shown to you actually. The language that author use to explained their way of doing something is easily to understand. The article writer was did a lot of research when write the book, therefore the information that they share to you personally is absolutely accurate. You also can get the e-book of Programming Computer Vision with Python: Tools and algorithms for analyzing images from the publisher to make you considerably more enjoy free time.

Robert Ford:

People live in this new day time of lifestyle always attempt to and must have the extra time or they will get large amount of stress from both daily life and work. So , if we ask do people have spare time, we will say absolutely sure. People is human not really a huge robot. Then we consult again, what kind of activity do you possess when the spare time coming to you actually of course your answer may unlimited right. Then do you try this one, reading guides. It can be your alternative throughout spending your spare time, the book you have read is actually Programming Computer Vision with Python: Tools and algorithms for analyzing

images.

Sharon Wilson:

Reading a book being new life style in this calendar year; every people loves to learn a book. When you study a book you can get a great deal of benefit. When you read publications, you can improve your knowledge, mainly because book has a lot of information into it. The information that you will get depend on what sorts of book that you have read. If you need to get information about your study, you can read education books, but if you act like you want to entertain yourself read a fiction books, this kind of us novel, comics, and also soon. The Programming Computer Vision with Python: Tools and algorithms for analyzing images will give you new experience in examining a book.
