Computational Methods for Complex Liquid-Fluid Interfaces (Progress in Colloid and Interface Science) From CRC Press

Computational Methods for Complex Liquid-Fluid Interfaces highlights key computational challenges involved in the two-way coupling of complex liquid-fluid interfaces. The book covers a variety of cutting-edge experimental and computational techniques ranging from macro- to meso- and microscale approaches (including pivotal applications). As examples, the text:

- defines the most important interfacial quantities and their experimental investigations, providing theoretical background and detailed solutions,
- describes vital techniques used in interfacial flow problems, such as modern meshless numerical methods and conventional computational fluid dynamics methods, and
- discusses the technicalities of correctly using the computational methods developed for interfacial flows, as well as the simulation of interesting interfacial flow physics.

Edited and authored by leading scientists and researchers, **Computational Methods for Complex Liquid-Fluid Interfaces** offers an authoritative and state-of-the-art overview of computational methodologies and simulation techniques for the quantification of interfacial quantities.

Editorial Review

About the Author

Mohammad Taeibi Rahni received both his B.Sc and M.Sc from the University of Texas at Austin, USA, and his Ph.D from the University of Illinois, Urbana-Champaign, USA. He is a guest researcher at the Max Planck Institute of Colloids and Interfaces in Potsdam, Germany, and has a full-time appointment with Sharif University of Technology, Tehran, Iran. His main area of interest is computational fluid dynamics, with particular emphasis on the application of various computational techniques to interfacial phenomena.

Mohsen Karbaschi earned his Ph.D in chemical engineering from Sharif University of Technology, Tehran, Iran, linked to the Max Planck Institute of Colloids and Interfaces in Potsdam, Germany. He has worked as a researcher at the Max Planck Institute of Colloids and Interfaces since 2011. His primary research interests lie in the area of surface science and multiphase flows, particularly with respect to computational fluid dynamics simulations and experimental analysis.

Reinhard Miller studied mathematics at the University of Rostock, Germany, and did his Ph.D and habilitation at the Berlin Academy of Sciences, Germany. He currently works at the Max Planck Institute of Colloids and Interfaces in Potsdam, Germany. His scientific interests are experimental investigations of adsorption layers at liquid interfaces under dynamic conditions, interfacial rheology, stability of foams, and emulsions.

Users Review

From reader reviews:

John McDole:

Reading a publication can be one of a lot of task that everyone in the world adores. Do you like reading book consequently. There are a lot of reasons why people fantastic. First reading a guide will give you a lot of new facts. When you read a reserve you will get new information due to the fact book is one of various ways to share the information or their idea. Second, studying a book will make you actually more imaginative. When you looking at a book especially fictional book the author will bring you to imagine the story how the character types do it anything. Third, you are able to share your knowledge to others. When you read this Computational Methods for Complex Liquid-Fluid Interfaces (Progress in Colloid and Interface Science), you are able to tells your family, friends in addition to soon about yours book. Your knowledge can inspire average, make them reading a reserve.

Nancy Reese:

The book Computational Methods for Complex Liquid-Fluid Interfaces (Progress in Colloid and Interface Science) has a lot associated with on it. So when you make sure to read this book you can get a lot of benefit. The book was published by the very famous author. This articles author makes some research ahead of write

this book. This particular book very easy to read you can get the point easily after reading this book.

Thelma Price:

As we know that book is important thing to add our understanding for everything. By a book we can know everything we want. A book is a range of written, printed, illustrated or maybe blank sheet. Every year had been exactly added. This book Computational Methods for Complex Liquid-Fluid Interfaces (Progress in Colloid and Interface Science) was filled about science. Spend your time to add your knowledge about your science competence. Some people has distinct feel when they reading any book. If you know how big benefit from a book, you can really feel enjoy to read a e-book. In the modern era like now, many ways to get book which you wanted.

Brian Kelley:

What is your hobby? Have you heard that will question when you got scholars? We believe that that question was given by teacher with their students. Many kinds of hobby, All people has different hobby. And you know that little person like reading or as examining become their hobby. You need to know that reading is very important along with book as to be the factor. Book is important thing to increase you knowledge, except your current teacher or lecturer. You see good news or update about something by book. Numerous books that can you go onto be your object. One of them is Computational Methods for Complex Liquid-Fluid Interfaces (Progress in Colloid and Interface Science).
